ABOUT

AppyThings is a Dutch integration consultancy specialised in designing, securing and managing API landscapes. They help large organisations build digital ecosystems by connecting systems in smart, maintainable and secure ways.

They work with Azure, GCP, Apigee, Kong and Kafka. Their integrations support digital identity, real time logistics, data ingestion and mission critical applications used by millions.

Consultancy skills matter here. The team is social, curious and collaborative. Engineers are expected to communicate clearly, be pro active and represent AppyThings with quality and confidence at clients.

ROLE DESCRIPTION

You join the Azure integration team and design how systems communicate across cloud and on premise environments. You do not build product features. You create the integration layer that keeps enterprise platforms reliable and secure.

Your work includes:

- Designing APIs and integrations using Azure API Management
- Working with serverless components like Azure Functions
- Using Event Grid, Event Hub or Service Bus
- Building CI CD pipelines
- Automating infrastructure using Terraform
- Advising clients on patterns, scalability and security
- Collaborating closely with architects, developers and product teams
- Communicating proactively and representing AppyThings professionally

This role is open to mediors and seniors. You must live in the Netherlands.

REQUIREMENTS

Must have

- Hands on Azure experience
- Background in building integrations beyond simple REST endpoints
- Experience with API security, versioning, governance and monitoring
- Terraform and CI CD knowledge
- Strong communication skills and pro active mindset
- Comfortable in client facing consultancy
- Fluent English and based in the Netherlands

Big pluses

- Experience with event driven systems

CONDITIONS

- Salary up to €85.000 per year
- Lease car or mobility budget
- Pension plan
- Hybrid work model with two office days in Utrecht
- Training budget and certifications
- Open, warm and technically strong team
