COMPANY'S PROFILE

Our client started developing various software versions years ago with the goal of improving the experience of telling digital experiences. They have now developed this to the point where they are the only company in the Europe to offer digital experiences in this way. They do this with their own software product, taking storytelling to the next level.

In combination with their software, they also set up hardware at locations to create 360-degree visualization, express holographic imagery and play with screens live during a presentation. You can think of this as an experience similar to VR-glasses, but then that you can actually walk through a space and experience the feeling together with others. Large international clients such as banks, clothing brands, airlines are already using this, making the customer experience go to the top on a whole other level. As a result? More sales, more revenue and more growth for the customers.

What can the software then be used for? Presentations, meetings, trainings, product reveals, interactive signage to the audience and much more. The techniques are limitless, such as the roof for this company. Can it be designed in a proof of concept? Then it is going to be built. They are currently a small tight-knit team which is planned to expand to multiple teams over the course of the year to continue to deliver value to the users.

JOB DESCRIPTION

What do they need? They're looking for a skilled DevOps Engineer to join their team. Put plainly: it's not just all about coding; it's about understanding your role in the team. You're not just a DevOps Engineer; you're a valuable team player who can handle things independently, is proactive, organized, and knows how to take charge.

Your journey with our client will be exciting. You'll play a crucial role in maintaining and expanding CI/CD pipelines using CircleCI, working seamlessly with their talented development team. Your expertise in managing and extending Docker instances will be the secret sauce for their operational success. As their go-to 3rd line support (don't worry, it's only during working hours), you'll be the hero, addressing issues with instances, especially during critical situations.

Now, as a DevOps Engineer, it's not just about getting hands-on with development. Around 25% of your time you'll be exploring new ideas or opportunities to improve the product and their usage of AWS services. This isn't just essential for our client; it's a big deal for their clients too. Your expertise in AWS is valuable – offering that extra insight..

REQUIREMENTS

- Minimum 2 years experience as Devops Engineer/ or a familiar role.
- Strong communication skills in English are required. It's a bonus if you also know Dutch (They'll pay for half if you want to learn it).
- Experience in Docker.
- Experience in Git.
- Affinity for a (typed) development language is a crucial.
- Have good experience in working in multidisciplinary teams.
- Experience with AWS (Client current stack: **S3, RDS, EC2**).
- Nice to have:

- Experience with Networking (or willing to learn it).
- AWS Certificates (or willing to get them).
- Experience with Jira.

OFFER

Besides working on one of the coolest software products, you will also get nice benefits.

- Salary up to €5500 per month.
- Hybrid working (2 days in the office).
- Access to company-provided pool cars for employee use.
- 25 holidays.
- Pension.
- Laptop.
- Phone subscription compensation.
- Company events such as a yearly ski trip.
- Personal development budget.
- Annual bonus that can go as high as 3 months salary.
