ABOUT THE COMPANY

Our client stands out in the IT landscape as a driven, innovation-focused organization providing cutting-edge solutions to a diverse range of clients. With a reputation for transforming complex processes into streamlined, digital solutions, they focus on integrating the latest technologies and maintaining reliable, scalable infrastructure. Their expertise spans across government, utilities, finance, and other sectors, where they deliver tailored, high-impact IT services.

Operating at the heart of digital transformation, the company prioritizes robust, secure, and efficient technology that simplifies and enhances client workflows. Collaboration is a core part of their culture in which they bring technical depth and an unwavering commitment to quality service. Within this tight-knit team, you'll contribute to projects that emphasize transparency, integrity, and user-centered design, ensuring that each solution not only meets but exceeds client expectations. With a focus on development, team support, and continuous improvement, our client is a place where your skills will grow alongside a dedicated team.

WHAT ARE YOU GOING TO DO?

As the DevOps Engineer, you'll work on critical infrastructure projects, build and manage pipelines, and help maintain cloud environments. You'll handle everything from Linux server configurations to deploying automated workflows, ensuring smooth operations for all departments. The team values problem-solving and reliability, so you'll need the ability to assess the complexity of incoming tasks and respond swiftly. This role also allows you to grow into areas like Kubernetes, with a focus on expanding both your technical and organizational skill sets.

ROLE DESCRIPTION

As a DevOps Engineer, you'll be the hands-on force behind continuous integration and deployment, setting up and managing CI/CD pipelines with Jenkins. With a keen eye on performance and stability, you'll take charge of AWS cloud environments, optimizing and tailoring them to meet evolving project demands. Your work also involves Linux servers and Docker container management, ensuring that applications deploy consistently and efficiently across varied environments.

Security and network stability are your domain. You'll work to secure systems, monitor networks, and tackle potential issues proactively, maintaining a robust defense against threats. Close collaboration is part of your routine, working with technical teams to tackle complex challenges and ensure smooth service delivery. Your role calls for not only technical know-how but also an organized approach and the initiative to lead project tasks when necessary, supporting scalable, efficient operations every step of the way.

- 3+ years of relevant DevOps experience.
- Strong knowledge in network management and cloud services (AWS essential).
- Experience with Jenkins for pipeline setups and automation.
- Proficiency with Linux and Docker.
- Clear, structured thinking and good organizational skills.
- Proficient in English, with a commitment to long-term projects—no job-hoppers!
- Willingness to learn Kubernetes on the job.

CONDITIONS

- Salary up to €5,500 per month.
- 8% holiday allowance.
- Flexible work environment with a hybrid office setup.
- Opportunities for growth in both technical and leadership areas.
- A collaborative, no-nonsense team with a direct impact on innovation and service quality.
