THE COMPANY

Our client has been around since april of 2021 and has been building at their product ever since. It's still a relatively small company but the aspirations of this company are nothing less than enormous.

They've been making their first revenue and have strong financial backing, which means, even without revenue they could survive for at least the coming 2,5 years.

Our client is tackling the ever growing MaaS (Mobility as a service) industry. The likes of Uber and MobiGo will have to make way for this more convenient, fair and green solution our client provides. They partner with national and international transport operators and mobility service providers to redesign the mobility UX. The financial bridge of MobiFi aims to streamline the exchange experience of mobility token to cryptocurrencies so that everyone can invest their mobility credit in Decentralized Finance (DeFi) services.

Our client is providing a service where planning, ticketing, pricing and incentives are all combined into one app. The final part of this equation is new. Where our client differs from current MaaS services, is that the incentivise you, through blockchain technology, to take a more green approach to traveling. You get rewarded in both tokens as well as NFT's for using their app and picking more ecologically friendly options.

They have just released their first product and have their application up and running. They've been making their first revenue lately. However they have such strong financial backing, that even without further revenue they could survive for at least the coming 2,5 years. Currently their international team consists of five very motivated and driven people, they're looking to grow their team to around 10 people by the end of next year!

THE JOB

So you will be joining a team of young and motivated developers who believe in blockchain and have a dream of improving the world.

While the role is full stack, the weight is a little more on the backend. The main techstack is Node, React and Typescript.

You will be working in an agile work environment and will be working on both the frontend as well as the backend for their Dapp (decentralized application).

You will be responsible for (among other things):

- Delivery of frontend services
- Delivery of backend services for mobility services
- Building API endpoints
- Integration with thirds parties

WHAT DO YOU BRING?

Must haves:

- Be passionate about working in a startup in the crypto industry.

- Be willing to learn and be able to communicate well.
- At least 2 years of professional experience with Node.
- Experience with frontend HTML, CSS, Javascript and Typescript (preferably React)
- Experience with CI/CD.
- Experience working in an Agile work environment

Nice to have:

- Experience with AWS.
- Experience with Github Actions.
- Experience with Flutter.
- Experience in Blockchain / with Solidity.

THE PERKS

- Work on the frontier of technology and help the environment while doing it!
- Possibility to grow in any direction within the company.
- Get stock options in a company you really want stock options in.
- Get a token allocation.
- Yearly salary up to 75k (depending on your experience).
- Work fully remotely!
