SO WHAT DO THEY DO?

Let me tell you a bit more about what specifically they are involved in! This company is focused on sustainable mobility and offer electric cars and charging solutions for both individuals and businesses. They do this exclusively with Tesla cars, Model 3, Y, X and S. It is not easy accessible for everyone to contribute to a better world by driving sustainably. Our client wants to lower this threshold and make a bigger contribution by having a robofleet of 15,000 self-driving Tesla's throughout Europe by 2025!

Because of all the great successes they are already active in the Netherlands, Germany, Belgium and Denmark. What's cool about this company is that they have a bigger vision in the form of a sustainable future. Through their contribution there is already an annual saving of as much as 7 billion g/co2, can you smell the clean air already? They do all this in a completely transparent way which is fitting for these times we are living in. Does this sound great? Then read on to see what projects they have in store for you!

WHAT ARE YOU GOING TO DO?

We are looking for a passionate Node.js developer to help our client support the technical direction they have taken on this year. Right now the business is running on a lot of legacy and new features cannot be planned in. Therefore, they are working out a roadmap and implementing a digital solution that can scale with them in the future.

In the future they would like to grow internationally and therefore they are looking for someone who has experience with scaling code. Preferably already someone who has worked with multiple countries on a project basis. The desire is to make the applications more resilient to future challenges.

As a fullstack js Developer, you will be responsible for developing and implementing new features and improving the resilience of the applications. You will work closely with the team to ensure that the digital solution functions optimally and grows with the business.

Some projects:

Greenfield: Integration and Documentation

Implement new features to further enhance usability such as a customer portal and lease configurator.

Project scalability and stability

Eventually the desire is to move to a cloud native working environment allowing you to build your own service.

REQUIREMENTS

The most important thing is that you understand infrastructure, architectures, and conceptual thinking. We are looking for a professional who can work independently with the following techstack

Node.JS React.JS Typescript Cloud: AWS, Azure, or GCP

If you are highly skilled in another conceptual model such as Laravel, Python, Ruby on Rails, or Kotlin, and have an interest in Node.JS, I would also like to get in touch with you!

WHAT DO YOU GET IN RETURN?

The job itself is already super cool, and in return, you get some fantastic benefits!

- Salary up to €4500
- Choice of 3 Teslas that you can reserve for personal use.

- 2 weeks per year, you can go on vacation with a Tesla.
- Exciting monthly activities such as Padel, Karting, and fun get-togethers.
- Vacations like winter sports and trips to Scotland.
- Hybrid work environment with an office next to Amstelstation.
- A company with a lot of freedom.
- Lunch provided.
