BEDRIJFSPROFIEL

At our client, they dream of well-organized and future-proof general practitioner practices, and accessible healthcare for everyone in the Netherlands. They collaborate with GPs and their teams to achieve this goal.

With their comprehensive solution, they provide clarity, make the GP profession manageable, and proudly support healthcare delivery in the Netherlands. They are young, ambitious, and eager to shape our plans together with frontline healthcare professionals. Will you help shape the practice of tomorrow?

About the Software

Their software package makes GP practices manageable again. Through smart consultation preparation, they reduce workload. Their digital front door prepares all consultations with an S-rule, urgency, and the next best action. They align with the user's vision for the right care in the right place, accommodating the unique workflows of each practitioner.

Within the dashboard, healthcare providers have all information in one overview, enabling collaboration within the care group to address the healthcare needs of the collective population.

FUNCTIE OMSCHRIJVING

As a senior developer, you will collaborate with the software team on portal development. This focuses on supporting and relieving GPs and their teams, and improving patient experience. They have ambitious software development plans that they want to shape further with the team. While the core product is secure and stable with unique features, their ambitions are greater.

User-friendliness and reliability are paramount. By closely collaborating with GP practices to understand their challenges and processes, your modern software development expertise will enhance overall GP care!

- Independently write and test code ("You build it, you run it")
- Contribute to software architecture discussions
- Set priorities for software development
- Assist in delivering client support directly to GPs, medical assistants, and patients
- Willingness to maintain the system outside office hours when necessary, though efforts are made to prevent this
- Agile/Scrum methodology to quickly adapt to changing priorities
- Aim to achieve 1200 hours of workload relief in the next 18 months by building a next-generation portal

FUNCTIE EISEN

- Proficiency in JavaScript and TypeScript
- Ability to set up clean frontends, preferably in React
- Comfortable building backends with Node.js and Express, familiarity with backend frameworks (NestJS, TypeORM) preferred
- Experience with Cloud services (AWS/Azure/Google Cloud) or affinity with (on-premise) infrastructure

Above all, you are motivated by the mission and vision's ideals and want to make a substantial contribution to the future of GP care.

ARBEIDSVOORWAARDEN

- Gross salary of €5000-€6500 based on experience for full-time employment (including vacation pay)

- Flexible vacation days
- Opportunity to shape this role further due to our young age and growth ambitions
- Opportunity for further development, both in healthcare (by regularly shadowing in GP practices) and as a technologist (e.g., obtaining AWS certifications)
- Annual development budget
- Office lunches
