COMPANY PROFILE

At **Buurtdokters**, we dream of well-organized, future-proof general practices and accessible healthcare for everyone in the Netherlands. Together with GPs and their teams, we're turning that dream into reality.

With our all-in-one solution, we provide clarity, make the GP profession more manageable, and proudly support the delivery of healthcare in the Netherlands. Our young, ambitious team works hand-in-hand with healthcare professionals to shape the practice of tomorrow. Will you help us achieve this vision?

About the Software

Our software brings manageability back to GP practices. With smart consultation preparation, we reduce workload and enable efficient workflows.

Our digital front door supports consultation preparation through S-rules, urgency levels, and next-best-action recommendations. Tailored to the user's vision of "the right care in the right place," we adapt to the unique processes of every GP.

With our dashboard, healthcare providers have all necessary information in one place, facilitating collaboration within care groups to address the population's healthcare needs.

ROLE DESCRIPTION

As a **Senior Developer**, you'll collaborate with our software team to develop our portal. Your work will support GPs and their teams, improve patient experiences, and drive healthcare innovation.

We have big ambitions for software development, and we're looking for someone who can help us turn those into reality. While our core product is stable and packed with unique features, there's much more to achieve.

What you'll do:

- Write, test, and maintain code independently ("You build it, you run it")
 - Participate in software architecture discussions
 - Set priorities for software development
 - Provide direct support to GPs, medical assistants, and patients
 - Be available for system maintenance outside office hours when necessary (though we aim to minimize this)
 - Work within an Agile/Scrum methodology to adapt to changing priorities
 - Help develop the next-generation portal, aiming to save 1200 hours of GP workload in the next 18 months
-

REQUIREMENTS

- Seniority in **JavaScript** and **TypeScript**. 5 + years
- Experience creating clean frontends, preferably with **React**
- Backend development experience with **Node.js** and **Express**; familiarity with frameworks like **NestJS** or **TypeORM** is a plus
- Knowledge of cloud services (AWS, Azure, Google Cloud) or affinity with on-premise infrastructure

Above all, you are motivated by the mission and vision's ideals and want to make a substantial contribution to the future of GP care.

CONDITIONS

- **Gross salary:** €5000 - €6500 per month (depending on experience, including holiday pay)
- Flexible vacation days
- The opportunity to shape your role as we grow
- Development opportunities, such as shadowing GP practices or earning technical certifications (e.g., AWS)
- Annual training budget
- Office lunches

Buurtdokters is collaborating with Haystack People for this vacancy, a specialized agency that understands how important it is to find a workplace where you feel valued and can grow.

Haystack People provides expert guidance throughout the application process. They assist with your introduction to Buurtdokters, provide relevant background information, and prepare you for interviews and negotiations, helping you take the next step in your career.

We look forward to receiving your application, including your CV, at **l.verweij@haystackpeople.nl**. For any questions, feel free to contact Lars Verweij at **+31 6 20293364**.
