## COMPANY PROFILE

Our client is a leader in the ERP (Enterprise Resource Planning) sector, providing an innovative and flexible system that supports the complex operational needs of businesses across the Netherlands, Europe, and beyond. Their ERP solution is designed to streamline processes and ensure that millions of products are shipped efficiently. They pride themselves on a customer-centric approach, continuously innovating to stay ahead of industry trends and meet the evolving needs of their clients.

With teams based in the Netherlands and Canada, they foster a culture of openness, collaboration, and continuous improvement. They believe in shared ownership and responsibility, encouraging team members to contribute to both the codebase and the processes they use. As part of this rapidly growing organization, you will work alongside talented professionals who are passionate about delivering exceptional software solutions.

## JOB DESCRIPTION

As a Software Developer on our client's Services Engineering Team, you'll be at the heart of creating and improving the software that drives their customers' success. Your primary responsibility will be to develop custom software solutions that meet the specific needs of their customers and partners. This will involve working closely with product managers, customer-facing teams, other developers, and Quality Assurance to ensure that the solutions you create are not only functional but also reliable, efficient, and user-friendly.

Beyond creating custom solutions, you'll also play a key role in enhancing their internal tools. These tools are crucial for improving the efficiency of their team and enabling their partners to deliver top-notch service to their customers. You'll be involved in analyzing technical issues, implementing configuration changes, performing rigorous testing, and ensuring that any support requests are resolved quickly and effectively.

In this dynamic role, you'll need to be adaptable and responsive, as priorities can shift rapidly. You'll have the opportunity to work across different time zones, collaborating with their teams in the Netherlands and Canada. This international collaboration will not only broaden your experience but also allow you to contribute to solutions that have a global impact.

Our client is looking for someone who is not just a developer but a problem-solver who can approach challenges with creativity and critical thinking. Your ability to analyze complex issues, communicate effectively with different teams, and work independently will be key to your success in this role.

---
