HAYSTACK PEOPLE

Medior Back-End (Python) Developer

StartUp | Vast | 80k

COMPANY PROFILE

Our client has specialized in improving fruit cultivation over the past few years. Their technology helps growers manage resources and crops more intelligently and sustainably. By using depth cameras and RTK-GPS, they install their advanced edge devices on tractors. This equipment scans trees in real-time to gather data, which is then used to dose the right amount of chemicals, monitor soil quality, and ensure uniform tree growth.

All software is developed in-house by a talented team of developers. The visualization platform, which turns collected data into user-friendly insights for growers, is a crucial part of their offering. This helps growers not only manage their crops better but also increase productivity and reduce their environmental impact. The focus of our client is entirely on software development for hardware they procure themselves. These innovative solutions are applied worldwide and deliver measurable results for growers in various climates.

ROLE DESCRIPTION

As a Medior Python Developer, you will become the Python developer within a team of 10 developers, divided into two scrum teams. You will work on the backend systems that power a platform transforming complex data streams into actionable insights for growers worldwide. This platform enables data-driven decisions that contribute to smarter and more sustainable agriculture.

While your primary focus will be backend development in Python, you will also have the opportunity to engage in DevOps tasks and collaborate on frontend integrations. Our client promotes a culture of learning and growth, offering ample space for your innovative ideas and technical contributions.

You will work with Python and have the chance to expand your expertise in related technologies such as Kubernetes, RabbitMQ, and service architecture. Additionally, you can deepen your knowledge of cloud solutions and contribute to the scalability and efficiency of the platform. The company offers abundant opportunities for personal and professional growth, allowing you to innovate both the technology and yourself in a dynamic, international environment.

REQUIREMENTS

You are a driven Python developer with at least 3 years of experience in Python and related backend technologies, looking for a new challenge within an innovative start-up. You don’t need to be an expert in frontend or DevOps, but you are open to further developing those skills. What matters most is that you have a proactive attitude and a passion for technology.

Furthermore, you are:

- Organized and structured
- Communicative and enjoy working in a team
- Residing in the Netherlands and legally authorized to work here

EMPLOYMENT CONDITIONS

- A salary between €4500 and €6000 gross per month.
- 25 vacation days.
- A hybrid work model with a modern workspace in Utrecht.
- Access to a fitness center and daily fresh fruit at the office.

- The opportunity to work on products applied worldwide.
- Plenty of freedom and responsibility within a fast-growing international organization.
- The possibility to work from abroad for up to four weeks per year.
- A team of international colleagues and a startup culture that values personal development and team balance.
- IND sponsorship (relocation is not possible; only candidates already based in the Netherlands can apply).

Ready for the challenge? Do you want to contribute to the future of sustainable agriculture? Contact me at +31628965652 or email d.gontha@haystackpeople.nl
