HAYSTACK PEOPLE

Multiplayer Network Developer

Established | Vast | 65k

BEDRIJFSPROFIEL

What will happen when you build multiplayer-games on top of blockchain technology? You can basically have a multiverse and visit it in game (in theory). Or have your ultimate RPG character linked to you as an NFT. Welcome to the future of gaming. And we are at the forefront of it with our Play-To-Earn MMO which is basically "Animal Crossing" on the blockchain.

We are currently building a game on top of this technology and it’s going quite well. So well in fact that our game has some of the biggest traction on the blockchain gaming market and is ranked as one of the top projects. And it’s only getting better. But now to the important part.

We.Need.You.

FUNCTIE OMSCHRIJVING

Our game is big and only getting bigger. Because every player can build their own world and interact with each other and visit other worlds we are looking for a multiplayer network engineer that can make every interaction seamless. Our mission for this project is to introduce the world to the magical world of blockchain, learn about NFT’s and even let people earn some real-world value all while having fun!

Are you ready to be a part of it?

FUNCTIE EISEN

What we're looking for in you:

- You have worked in a role as a game developer in a video game production company
- You know your way around Unity and C#
- Having worked with Photon is a plus
- You have experience with building a multiplayer environment.
- You have knowledge of the world of blockchain (not the current price of Bitcoin but rather what is Ethereum, how does it work and why is it changing the world).
- Education doesn't matter but then you should be able to show that your work is of the same level as someone with an educated background. Just to show us that education doesn't matter ;)
- Fluency in English (orally and written)
- The position is remote but we´d like you to be within 2h of the CET timezone.

ARBEIDSVOORWAARDEN

What we can give you:

- Something very complicated to tell at parties. It will be like explaining facebook to people in 2004.
- You're also the coolest person in the room at parties when crypto is talk of the town.
- A place in the history books
- Be a part of a diverse and highly skilled team
- A completely remote job (so you must like your home office, but of course you can visit collegues if you want.)

- Competitive salary

Looking forward to hear from you:)
