HAYSTACK PEOPLE

NodeJs Developer | Event Digitization

ScaleUp | Vast | 70k

COMPANY

Do you want to expand the stage experience beyond the usual, physical live show concept? Our partner can helps their clients with every part in the digitization of the events. From shooting film, producing, distributing and cashing in ticket sales. Our partner works with award-winning production teams and shoots content at world-renowned venues, allowing artists to deliver the most visually engaging and sonically advanced shows to their fans.
The organization has been around for 3 years and has built its own platform. The organization's idea is that they can completely unburden artists in the digital distribution of their events. Of course, there are concerts that are easily accessible to the true fan. But of course there are also concerts on the other side of the world. In this way they offer the option to attend concerts remotely with sublime image quality, on stage cameras and 4K image quality.

DESCRIPTION

The development team now consists of 8 engineers. With decades of production experience, their team has loads of expertise in creating long-form content for the ultimate viewing experience on mobile, desktop and connected TVs. The organization works with cutting-edge technologies. Our partner has built a delivery platform, fully managed by a professional team. This allows them to ensure that the shows always look superb and that fans can enjoy them while they are taking place or anytime On Demand, wherever they are.
The platform actually consists of three sharing platforms tailored to the medium for which they were developed (TV App, Mobile App and Web application). These platforms all share the business logic and thus all depend on your backend. The Node.Js developer we are looking for will take over the tasks of the lead / Head of IT. Because of his increasingly broad role, the desire arose to appoint a dedicated developer for this.
The environment is almost entirely developed in-house in Typescript / Node.Js on AWS using Terraform. The desire for a developer of late Medior / early Senior level is because you (although phased) will be ultimately responsible for the back-end. This means that you will have to become familiar with the current environment, but also that you will soon have a role in the further optimization of the platform. For example, payments are currently handled via a headless Shopify module, but with the integration of Stripe they want to set this up completely in-house. So if you have extensive experience in NodeJs and Typescript, a healthy dose of interest in Dev-Ops and you can appreciate the dynamics of a start-up knowing that the Angelinvestor will make sure you don't have to worry about your income, we would like to hear from you.

WHAT YOU NEED TO HAVE

- 4+ years of development experience
- Experience With JavaScript frameworks such as React, Vue or React Native
- You have experience with guiding juniors or have been a team lead for at least 1 year.
- 1 year React Native experience
