ScaleUp | Vast | 60k

COMPANY PROFILE

The world revolves around innovation and simplifying processes. That’s exactly what our partner has done. Within Salesforce, one of the largest CRM systems globally, they have developed and integrated a payment solution.

Thanks to their technology, payments are no longer a separate back-office process but an integral part of customer relationships and business strategies. All data is in one place, eliminating the need for external payment providers or separate systems.

The platform is used by international businesses and non-profits, including WWF, Unicef, and the Red Cross. E-commerce companies and membership organizations worldwide also rely on this solution to manage payment flows efficiently and gain insights into financial data.

What can the platform do?

- Integration in Salesforce – Businesses and organizations can process, manage, and analyze payments without leaving the platform.
- Support for multiple payment methods – Including direct debits, credit cards, iDEAL, PayPal, and SEPA payments.
- For non-profits and commercial companies – Optimized for donation flows and subscription models.
- Data-driven insights – Helps organizations make strategic decisions based on real-time payment data.

JOB DESCRIPTION

As a Back-end Developer, you’ll be part of the DevOps team and involved in the entire development process. This means not only writing code but also contributing to architecture, performance, and scalability.

You’ll work in an international team of developers based in the Netherlands, Finland, Poland, and Spain. The company currently has 26 employees, including 10 developers, with plans to establish two development teams by the end of the year.

At our partner company, you’ll have plenty of freedom and responsibility. Your opinion matters, and you’ll have the space to bring your own style and vision to the products you work on. There are also ample learning and growth opportunities.

What Will You Do?

- Further develop the payment platform in Salesforce using PHP and Laravel.
- Collaborate with the product team to determine technical and functional requirements.
- Assist in creating test plans for quality control.
- Contribute to scaling the platform.
- Stay updated on new technologies and suggest improvements.

JOB REQUIREMENTS

- At least 2 years of experience as a back-end developer, preferably in a product environment.
- Extensive knowledge of PHP and Laravel, with an understanding of SOLID principles.
- Experience with APIs and integrations in a scalable application.
- Familiar with DevOps processes, version control (Git), and CI/CD pipelines.
- Strong command of English, both spoken and written.
- Analytical and problem-solving skills – you think strategically and proactively.

- Curious and eager to learn – you stay updated on new technologies and innovations.
- Independent and responsible – you take initiative and contribute to improvements.

BENEFITS

- Salary up to €5,000 gross per month, depending on experience.
- 50% remote work possibility.
- Flexible working hours.
- Company laptop.
- Annual training budget of €5,000.
- 25 vacation days per year.
- 8% holiday allowance.
- Travel expense reimbursement.
- Pension contribution, where you decide how to invest.
