HAYSTACK PEOPLE

Senior DevOps Cloud Engineer

Established | Vast | 90k

COMPANY PROFILE

Our partner, established in 2015, is a leading and innovative company in the digital field with a passion for engineering and top-quality innovation. They have a team of 80+ tech and creative experts, dedicated to helping clients with digital solutions. Their projects span national and international organizations, using cutting-edge technologies like Node.JS, ReactJS, and Typescript.
They are known for taking on cool and challenging projects for great clients. Now, they are seeking an experienced Cloud Engineer with extensive knowledge of Azure to strengthen their DevOps/SDLC environments and bring their passion for innovation to the cloud realm.
So are you a skilled Cloud Engineer with a passion for Azure? Then you need to read this vacancy for sure!

JOB DESCRIPTION

As a Cloud Engineer, you'll manage cloud environments for their clients, including critical setups. While extensive Azure experience isn't required, some knowledge or exposure would be valuable as you'll introduce Azure solutions to the development team. Sounds cool right?
One crucial skill they seek is Infrastructure as Code (IaC). Your ability to automate cloud resource management using IaC tools will be vital for creating scalable, secure, and easy-to-maintain solutions.
Your main task is designing and building infrastructure tailored to their clients' needs, leading initial sprints to guide developers. Collaboration is key as you work with diverse teams to develop top-notch software and cloud environments. Your Azure expertise, along with IaC skills, will complement their existing AWS-focused DevOps team.
Key Responsibilities:

- Delivering elegant and robust solutions for scalability, maintainability, and security.
- Managing Azure DevOps/SDLC environments, including critical setups.
- Designing effective DevOps solutions and collaborating with the development team and clients.
- Fostering a positive engineering culture and driving innovation.
- Independent and proactive work attitude, with strong teamwork skills.
- Analytical thinking to identify and implement improvements.

JOB REQUIREMENTS

- 5+ years of experience in modern Azure environments for software organizations, with site reliability engineering skills
- Knowledge and experience with cloud native environments and setting them up using infrastructure-as-code (Terraform) in Azure
- Ability to set up and manage Continuous Integration & Delivery pipelines for various software products, including monitoring/observability and technical documentation
- Extensive automation expertise using Python/Bash and other relevant skills
- Knowledge and experience with Docker
- Bonus: Background as a Software Engineer

WORKING CONDITIONS

- Salary up to 90k
- 25 vacation days
- Pension plan
- Bonus based on positive operating results
- Hybrid working and flexible hours in consultation with your team
- You will receive a laptop, headphones, and more.
- The entire team is AWS certified, and you'll have the opportunity to become certified too.
- You'll work with well-known large international organizations.
- You can work on both personal and professional goals through a growth plan.
