HAYSTACK PEOPLE

Senior QA Engineer

Established | Vast | 80k

COMPANY PROFILE

Our client is a European SaaS scale-up in education. They’re merging multiple e-learning platforms into one international product. The platform is already live, used by thousands, but still under heavy development.

The team: ~11 developers, 4 product owners, 1 designer, and currently 1 manual QA. They now need a Senior QA Engineer to bring automation and a quality-first mindset into the heart of the product. Hybrid setup: 2 office days (Utrecht, Mon & Wed), rest remote.

JOB DESCRIPTION

As Senior QA Engineer, you will:

- Own end-to-end test automation with Playwright (Typescript/Javascript).
- Design test strategies and build CI/CD pipelines in GitHub Actions.
- Support the shift-left movement: quality baked in from the start.
- Work closely with devs and product to clarify acceptance criteria.
- Coach the team in best practices, exploratory and release testing.

JOB REQUIREMENTS

- 5–7 years in QA/Test Automation.
- Hands-on with Playwright (or Cypress/Selenium + Typescript).
- CI/CD integration experience (ideally GitHub Actions).
- Strong communicator, able to advise both devs & PO’s.
- EU-based, fluent in English, 2 days per week in Utrecht.

TERMS OF EMPLOYMENT

- Salary: up to €6.000/month.
- Pension plan, 26 vacation days.
- Hybrid: 2 office days, rest remote.
- Free daily lunch, team events, and a supportive scale-up culture.

Want to shape a European SaaS platform where your work in QA directly impacts thousands of professionals?
