HAYSTACK PEOPLE

Medior Frontend Engineer React/Typescript – Top Tier NFT Project

StartUp | Vast | 120k

THE COMPANY

Late 2021 the Bored Ape Yacht Club took the world by storm. This phenomenon was being observed by the entire Web3 industry and some clever minds at The Sandbox decided to start their own project with the following goal:

"Create a game with a online presence that will combine sports, lifestyle, gaming, NFT's and the Metaverse into one."

Can you smell the opportunity?

Shortly after they launched their NFT collection which has sold uit and the current floor price on OpenSea is 1 ETH.

In addition to this they've succesfully raised 4.5 Million from a variety of investors of whom multiple word-class athletes.

And they're being endorsed by a basketball player that's on the cover of the most well known basketball game in the world.

Probably nothing?

THE JOB

Everything that has to do with the front-end my friend. This game expands to more than just "the game" there's the marketplace, the club store, partnership platforms, staking pages and so on!

Honestly, I don't get why you're still reading and haven't applied yet. But if you want to know some more details about the team size, the culture I get it. So keep reading please:)

Currently there are 9 people internally and 19 external to help build the game. The internal team consists of The Sandbox, Sony and Disney veterans. All these professionals get you bunch of experience to tap from.

Because this is Web3, everybody is learning and what better way for you to learn than from people that have ventured into the Metaverse just a little further.

You're going to join a team of collaborators and contributors because that's one of the most important aspects of the culture within the company "We are building and envisioning together."

That means one important thing.

- You know your stuff and we can trust that you can fix whatever it is you say you'll fix.

And what needs fixing and improving, is the frontend of their platform.

THE REQUIREMENTS

- 3+ years of experience in frontend software engineering
- You just get it
- Wished you bought BTC in 2010
- Even if you bought BTC in 2010 you'd still want to work in Web3 because it's awesome!
- React
- NextJS
- Typescript

- TailwindCSS
- Web3 is a bonus but not required

THE YIELD

- A completely remote job
- The coolest job of all your friends
- Salary up to 100k per year
- A place at the table of the digital future
- You'll need to explain it about 300 times to people what we work on until' they get it but that's a burden we all live with
