HAYSTACK PEOPLE

Medior Python Developer – AI startup – Utrecht

StartUp | Vast | 60k

YOUR EMPLOYER:

We are a cutting-edge AI startup that develops intelligent AI agents to automate customer service, reducing operational costs while boosting efficiency. With recent Series A funding, we are scaling rapidly, expanding our engineering team to drive AI-powered automation across industries. Our platform centralizes real-time customer data, enabling businesses to deploy AI solutions with full visibility and control over decision-making.
With an international, highly skilled team based in Utrecht, we foster a collaborative culture that balances office-based teamwork and remote flexibility. Now is the time to join us and be part of this transformative journey!

YOUR ROLE:

As a Backend Developer, you will be instrumental in scaling, optimizing, and professionalizing our AI automation platform. You'll design and build high-performance, distributed backend systems that seamlessly integrate AI models into customer workflows. Working closely with machine learning engineers and DevOps specialists, you'll develop cloud-native services, streamline CI/CD pipelines, and enhance system security and reliability.

This role offers an exciting opportunity to shape the future of AI-powered customer service in a fast-paced, venture-backed startup.

Responsibilities:

- Develop and optimize scalable backend services, cloud-based infrastructure, and REST APIs.
- Ensure performance and reliability by refining architecture, monitoring systems, and implementing security best practices.
- Streamline DevOps workflows by improving CI/CD pipelines and optimizing deployments.
- Collaborate on the technical roadmap, working with the CTO and engineering team to drive innovation.

WHAT IS REQUIRED?

- Experience as a Backend Developer, with expertise in Python, Go, Golang
- Hands-on experience with FastAPI or similar backend frameworks
- Background in cloud platforms (Google Cloud, AWS, or Azure)
- Experience with infrastructure as code tools like Terraform
- Proficiency in scaling distributed systems and optimizing backend performance
- Knowledge of API design, RESTful services, and microservices architecture
- Experience with PostgreSQL or similar databases, caching solutions

• Familiarity with CI/CD pipelines (GitHub Actions, Jenkins, etc.)
• Bonus: Experience with LLM integrations and AI-driven automation
• Residing in the Netherlands and legally authorized to work here

WHAT IS OFFERED?

• Competitive salary.
• Hybrid work model, with a modern workspace in Utrecht
• 25 vacation days to ensure a healthy work-life balance
• Work with cutting-edge AI and machine learning technologies
• The opportunity to lead, innovate, and scale in a venture-backed AI startup
