HAYSTACK PEOPLE

Fullstack Typescript developer | Health E-Commerce

ScaleUp | Vast | 80k

COMPANY

This fast growing digital health scaleup in Amsterdam develops several consumer brands focused on accessible and personalised healthcare. Its platform connects patients with doctors, pharmacies and laboratories and supports the complete journey from the initial intake to medication delivery and ongoing care.

The company is expanding rapidly and is already active across several European countries. A compact international team works alongside dozens of doctors, nurses and patient support employees.

This is an environment with short communication lines, direct access to the founders and significant individual responsibility. There is no ticket factory where developers only work on isolated components. Developers receive the problem, the context and the freedom to determine the right solution.

FUNCTIE OMSCHRIJVING

As a Senior Full Stack Engineer, you will share responsibility for the entire platform. You will work on the consumer experience, internal medical tooling, commerce, logistics, communication and the wider technical infrastructure.

One of the key projects is the development of a mobile patient platform that supports people throughout their treatment. Through the app, patients will be able to communicate with their doctor, monitor their progress and receive relevant information at the right moment. Experience with React Native is useful, but you do not need to be a specialised mobile developer.

The company is also expanding its range of treatments and medication. You will build customer journeys that offer the usability and conversion of strong ecommerce platforms, but within a medical environment where reliability, privacy and clear communication are especially important.

TypeScript is used across the entire stack. The web environment runs on Next.js with the App Router and Vercel. React Native and Expo are used for mobile development. The backend includes Supabase, Postgres, Medusa v2 and Railway. The wider stack includes Turborepo, Bun, Trigger.dev, Stream Chat, BigQuery and Metabase.

You will take complete ownership of functionality, from the initial product discussion through to the production release. You will work directly with the Tech Lead, founders, operations and medical teams.

Alongside building new functionality, you will:

• Improve and restructure existing code where necessary
• Increase the stability and performance of the platform
• Help shape technical standards and development processes
• Build features across frontend, backend and data
• Contribute to product decisions and the user experience
• Prepare the platform for new countries, healthcare categories and larger numbers of patients

The team deploys multiple times per day. This means you will see the results of your work quickly, but you will also be responsible for what you release into production.

REQUIREMENTS

• At least five years of professional experience as a Full Stack Developer or Product Engineer using TypeScript, React and Next.js
• Strong experience with both frontend and backend architecture
• You are genuinely full stack and can work independently across frontend and backend
• You have experience with consumer platforms, ecommerce or other digital customer journeys
• You have worked within a startup or scaleup, or within a larger product environment where you demonstrably held significant responsibility
• You understand how to develop quickly without losing sight of stability and long term maintainability
• You can take a feature from the initial idea through to production independently
• You have completed a university of applied sciences degree in a technical field
• You are available to work from the Amsterdam office at least three days per week

CONDITIONS

- A gross annual salary between €70,000 and €90,000, depending on experience
- 25 vacation days based on a 40 hour working week
- A full time position
- At least three days per week at the Amsterdam office
- During onboarding, you will initially work from the office full time
- One week per year during which you can work from abroad
- Free lunch at the office every working day
- A company laptop, with the option to use your own equipment if preferred
- The opportunity to participate in the company’s future success through equity after the first six months, depending on your contribution and development
