HAYSTACK PEOPLE

AI Platform Engineer

Established | Vast | 130k

COMPANY PROFILE

This is an established company in vehicle finance, backed by an experienced investor. It is investing in AI across sales automation, copilots and recommendation engines, and is building the platform to run that reliably. IT is a small team of around six people, so your work is visible and your decisions shape how things get built.

WHAT YOU DO

- Build AI and ML models for recommendations, predictions and automation within the commercial process.
- Integrate LLMs and AI APIs, including for internal copilots and AI agents.
- Take models into production and keep them there: pipelines, monitoring, retraining.
- Help shape the wider AI platform and architecture choices as the team grows.
- Keep the basics around AI use in check: security, privacy and explainability.
- Work closely with data engineering, product and software engineering to turn business problems into AI solutions.

WHAT YOU BRING

Must haves

- 4 to 7 years of experience in AI engineering, ML engineering or a similar platform role.
- Strong Python skills.
- Experience with LLMs, generative AI and AI APIs.
- Experience taking AI or ML solutions into production, with a cloud platform and CI/CD.
- Understanding of data engineering and API architecture.

You don't need to tick every box. If you're close, I'd still like to hear from you.

Nice to have

- Experience with Vertex AI, LangChain, LangGraph or the OpenAI ecosystem.
- Experience with BigQuery.
- Experience with Kubernetes or containerization.
- Experience with AI agents or real-time AI workflows.
- Knowledge of the Salesforce ecosystem.
- Experience with recommendation engines or AI in a sales context.
- Experience in fintech or automotive.

WHAT WE OFFER

- €7,000 to €9,500 gross per month, plus holiday allowance, depending on experience.
- A central role in how AI gets built here, with real autonomy over technical choices.
- A modern cloud and AI stack, in a team that is still taking shape.
- Hybrid working: three days in the office in the Utrecht area and two days from home.

The process

Three rounds. Round one covers mutual fit and what the company is building. Round two goes into technical depth. Round three is usually on-site, a final check where any open questions on either side get discussed directly.

You already live in the Netherlands and hold a valid work permit. No sponsorship or relocation.

Interested?

Send your CV to d.gontha@haystackpeople.nl and we'll set up a short call.
